SUMMARY

I'm Surendra, a 21 year old developer living in India. I am a self-taught developer who loves to code and make things.

Messing with React, Next.js, Node.js, Tailwind CSS and other modern web technologies.

SKILLS

Front end

- **HTML, CSS, JavaScript**
- NextJs, **React**, Redux Toolkit
- **Tailwind**, Bootstrap, Material UI

Back end

- **Node.js, Express.js, MongoDB**
- **MySQL**, Mongoose, Nodemailer, Vercel, Nginx, Postman, Docker
- Cloudinary, Razorpay, Puppeteer

More

- Git, **Github**, AWS S3, SSH,
- Deployment, Github Actions

EDUCATION

Shekhawati College, Sikar

Bachelor of Computer Applications

(BCA) 2023 - 2026

PROBLEM SOLVING

Solved 500+ problems on

[LeetCode](#)

CERTIFICATIONS

Web Development Projects - Udemy

- Certificate of Completion - [Link](#)
- Issued: May 9, 2024
- Description: Completed an extensive Udemy course covering various web development projects

PROJECTS

Freezer

[Demo](#)

[GitHub Repository](#)

- Built a media/file storage and playback web application using Next.js and TypeScript, focusing on fast, reliable delivery of user assets.
- Implemented scalable object storage on AWS S3 (presigned URLs) and a custom in-browser player UI using shadcn-ui and Tailwind CSS for a polished UX.
- Designed a backend using MongoDB for metadata and Redis for caching to reduce DB load and improve playback/startup latency.
- Optimized performance with Next.js SSR/ISR and caching strategies to minimize API calls and speed initial page loads.
- Added automated tests with Jest to improve reliability and catch regressions.
- Deployed to Vercel (<https://freezer-xi.vercel.app>) and integrated AWS services for production storage and delivery.

Notification Simulator

[Demo](#)

[GitHub Repository](#)

- Next.js + TypeScript app for composing and sending bulk SMS with batching and queueing to improve throughput.
- Backend designed for serverless execution (Lambda / Cloudflare) with MongoDB for message storage, logging, and retries.
- Responsive React UI built with Tailwind CSS; focused on usability, delivery status tracking, and scalable deployment workflows.
- Persisted message templates, logs, and delivery metadata in MongoDB to enable retries and delivery reporting.
- Architected the backend to run on serverless functions (AWS Lambda / Cloudflare Workers) for horizontal scalability and cost efficiency.
- Created a responsive UI using React + Tailwind CSS with validation and progress/status tracking to improve user experience.
